# CLS COMBAT TCCC LIFESAVER TACTICAL COMBAT CASUALTY CARE COURSE MODULE 05: **TACTICAL TRAUMA ASSESSMENT (TTA)**

Committee on Tactical Combat Casualty Care (CoTCCC)

**TCCC** TIER 1 All Service Members

[In Depth]

**TCCC** TIER 2 Combat Lifesaver **TCCC** TIER 3 Medic/Corpsman **TCCC** TIER 4 Combat Paramedic/Provider

TACTICAL COMBAT CASUALTY CARE (TCCC) ROLE-BASED TRAINING SPECTRUM

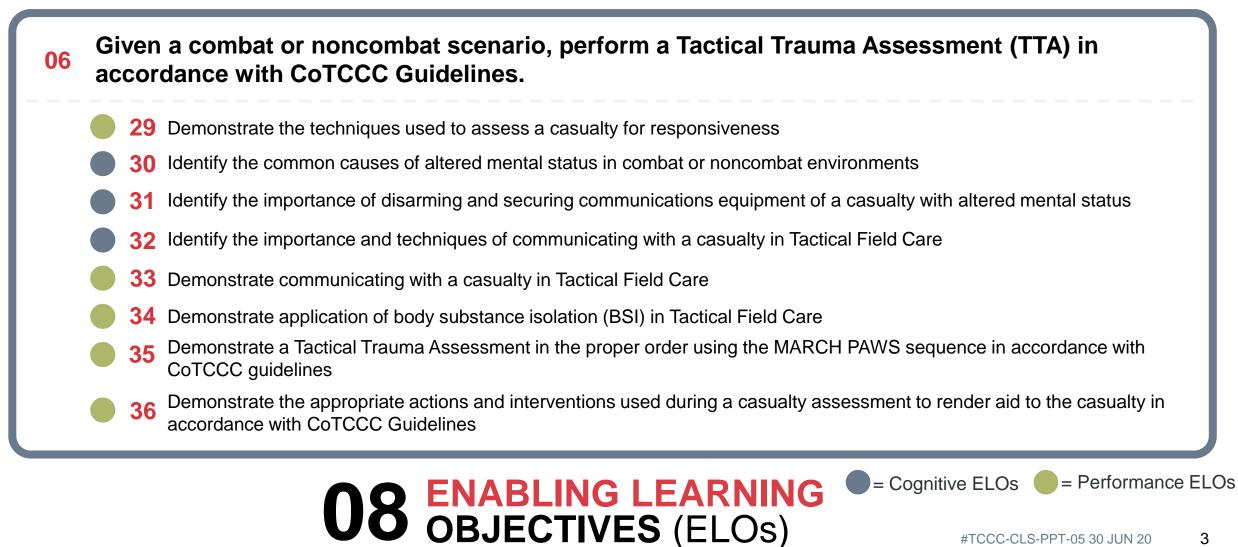

STANDARDIZED JOINT CURRICULUM

#### STUDENT LEARNING OBJECTIVES

## **TERMINAL LEARNING OBJECTIVE**

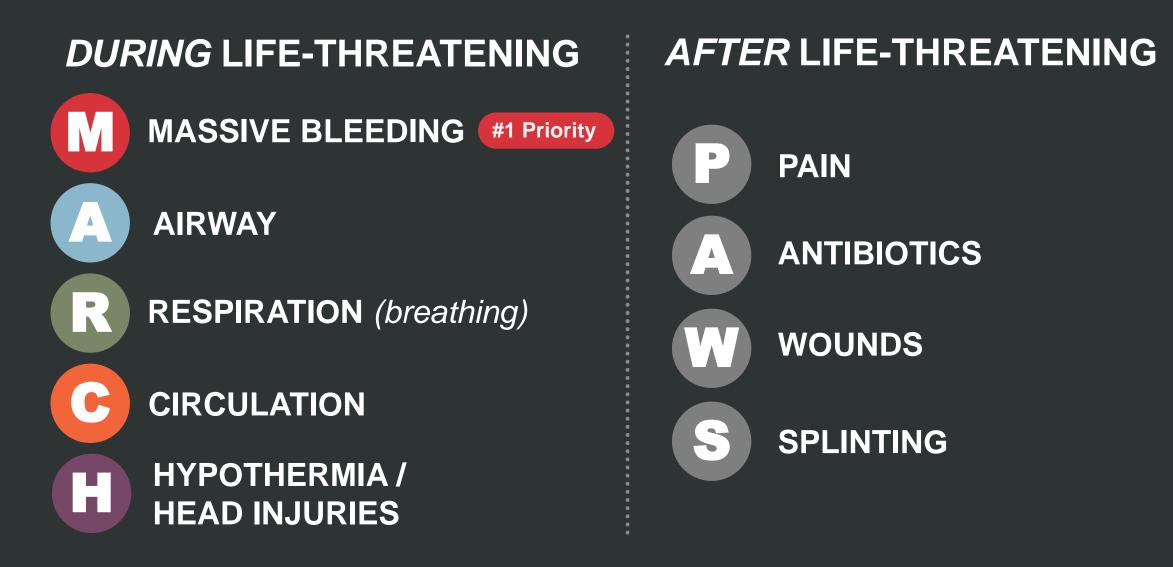

#### #TCCC-CLS-PPT-05 30 JUN 20 3

TACTICAL FIELD CARE MARCH PAWS

### **TACTICAL TRAUMA ASSESSMENT HOW-TO**

Video can be found on DeployedMedicine.com

5

#### COMBAT SPEED TTA "FIRE FIGHT CONSCIOUS CASUALTY"

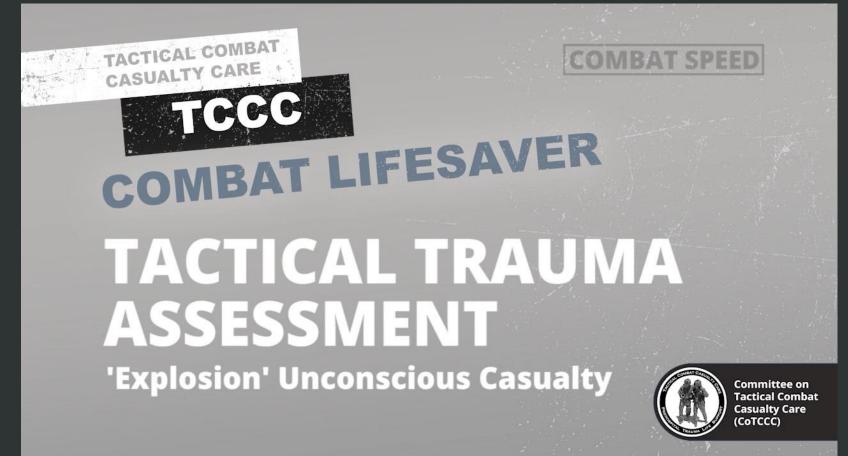

Video can be found on DeployedMedicine.com

6

#### COMBAT SPEED TTA "EXPLOSION" UNCONSCIOUS CASUALTY VIDEO

Video can be found on DeployedMedicine.com

## **BODY SUBSTANCE ISOLATION (BSI)**

**TACTICAL TRAUMA ASSESSMENT** 

Whenever possible, the responder should don **latex-free** gloves as a precaution

## **CASUALTY BLOOD SWEEP**

Your initial casualty evaluation should be a rapid head-to-toe check for any unrecognized life-threatening bleeding

Check the neck, axillary (armpit), inguinal (groin)

Check the legs, arms, abdomen, chest (in raking motion) and back

9

**MASSIVE BLEEDING** 

### QUICKLY IDENTIFY MASSIVE, LIFE-THREATENING BLEEDING

ground

#### **BRIGHT RED BLOOD**

is pulsing or spurting, or there is steady bleeding from the wound

Overlying clothing or ineffective bandaging is becoming SOAKED WITH BLOOD

# **BRIGHT RED BLOOD** is pooling on the

**IMPORTANT!** Casualties with severe injuries can bleed to death in *as little as 3 minutes* 

TCCC-CLS-PPT-05 30 JUN 20

**AMPUTATION** of

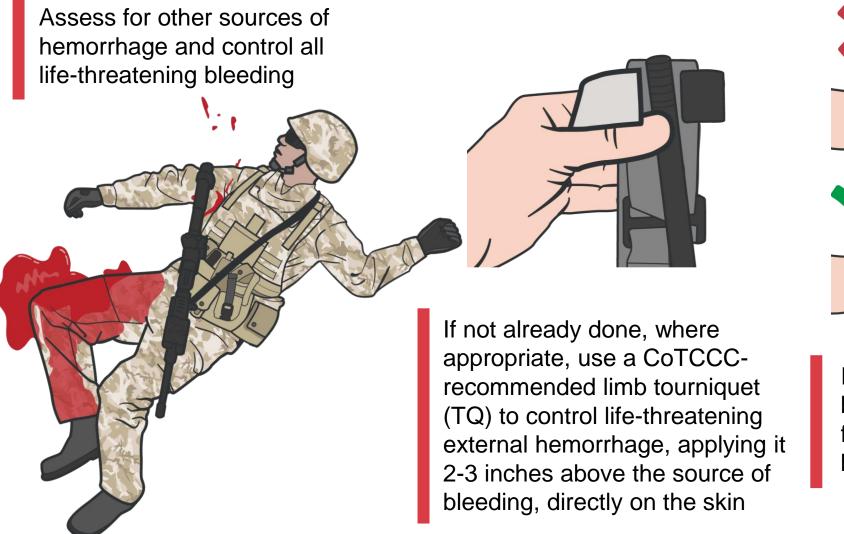

the arm or leg

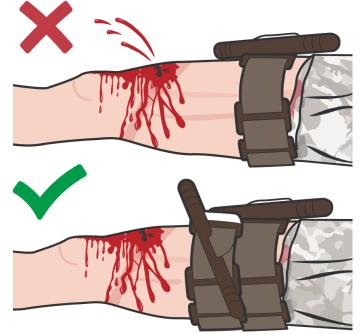

#### **MASSIVE HEMORRHAGE CONTROL IN TFC**

## **HEMORRHAGE CONTROL**

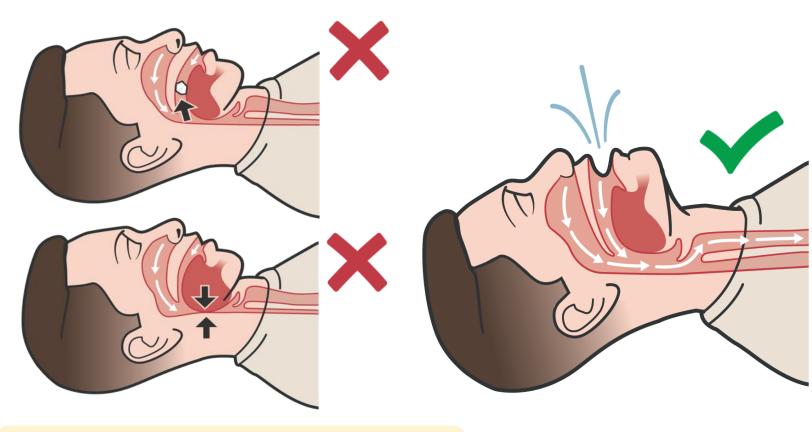

Reassess CUF interventions, and if bleeding is not controlled with the first TQ, apply a second TQ sideby-side with the first

## **IDENTIFYING OBSTRUCTED AIRWAY**

**IMPORTANT!** Remove any visible objects, but do not perform a blind finger sweep

M A R C H

#### SIGNS AND SYMPTOMS AIRWAY MAY BE BLOCKED:

Casualty is in distress and indicates they can't breathe properly

Casualty is making snoring or gurgling sounds

Visible blood or foreign objects are present in the airway

Maxillofacial trauma (severe trauma to the face) is observed #TCCC-CLS-PPT-05 30 JUN 20 12

**OPENING THE AIRWAY** 

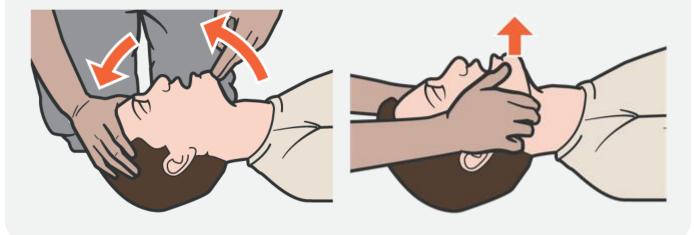

### IN A CASUALTY WITHOUT AN AIRWAY OBSTRUCTION, YOU CAN PERFORM THE FOLLOWING MANEUVERS:

**Unconscious** casualty's tongue may have relaxed, causing the tongue to block the airway by sliding to the back of the mouth and covering the opening to the windpipe

#### HEAD-TILT CHIN LIFT

**JAW-THRUST** 

If you suspect that the casualty has suffered a neck or spinal injury, use the jaw thrust method

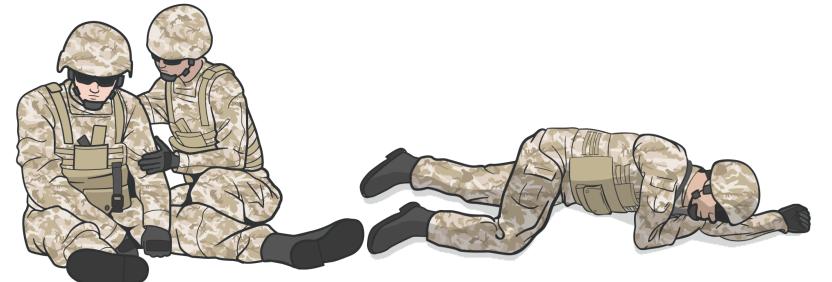

**MANAGING THE AIRWAY** 

#### **MANAGEMENT/RECOVERY POSITION**

Casualties with **severe facial trauma** can often protect their own airways by sitting up and leaning forward

Assist a conscious casualty by helping them assume any comfortable sitting-up position that ALLOWS THEM TO BREATH EASILY

For an unconscious casualty not in shock, place them into the **RECOVERY POSITION** 

## RESPIRATIONS

#### Breathing rate (Monitor respirations)

Level of consciousness

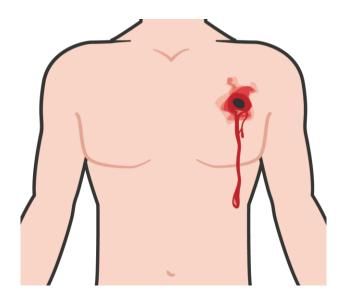

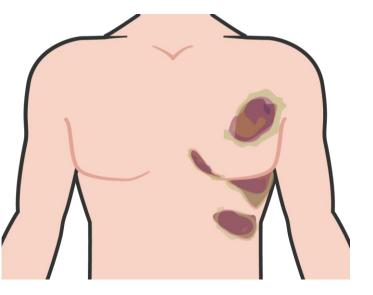

## LIFE-THREATENING CHEST INJURY

**RESPIRATION ASSESSMENT AND MANAGEMENT IN TFC** 

Expose the chest to assess for:

- Gunshot or shrapnel wound
- Blunt-force trauma
- Bruising or contusions
- Any deformities of the chest

If penetrating trauma is found or identified, apply a chest seal (vented, if available)

### **REASSESS TREATMENTS**

Reassess **ALL** treatment for Massive hemorrhage

Reassess Airway

Reassess Respirations

## **GENERAL INDICATOR OF SHOCK**

SIGNS AND SYMPTOMS OF SHOCK INCLUDE:

### **HYPOTHERMIA PREVENTION**

Get the casualty onto an insulated surface as soon as possible

Hypothermia is much easier to prevent than to treat! Begin hypothermia prevention as soon as possible

Decreased body temperature interferes with blood clotting and increases the risk of bleeding

Blood loss can cause a significant drop in body temperature, even in hot weather

#### **REMEMBER:**

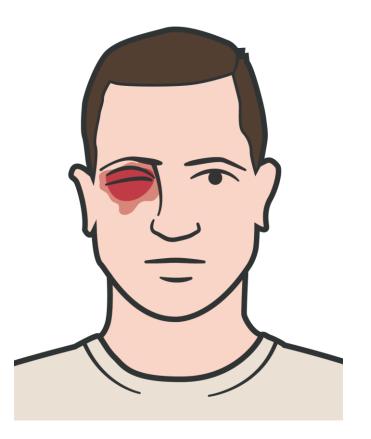

Hypothermia is an issue even in hot environments and must be prevented

#### IF A PENETRATING EYE INJURY IS NOTED OR SUSPECTED

Do not cover both eyes unless both eyes are injured

In the absence of an eye shield, consider using tactical eyewear

#### **PENENTRATING INJURIES**

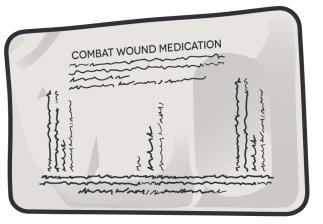

## **COMBAT WOUND MEDICATION PACK (CWMP)**

Acetaminophen is used for Pain Management

Meloxicam can give significant pain relief and will not alter the casualty's mental status

Contains oral antibiotic medication Moxifloxacin

#### **Remember:**

Found in JFAK

Document all medications administered (and time given) on DD Form 1380

**TACTICAL FIELD CARE GUIDELINES** 

## **INSPECT AND ADDRESS KNOWN WOUNDS**

Dress all known wounds and then assess all applied bandages for:

Increased pain

Skin discoloration

Irregular pulse

If any of these conditions are found, they might indicate an emergency!

Ensure the applied bandage isn't too tight; loosen

as while keeping the bleeding controlled

#### **DO NOT EVER APPLY IT AND FORGET IT!**

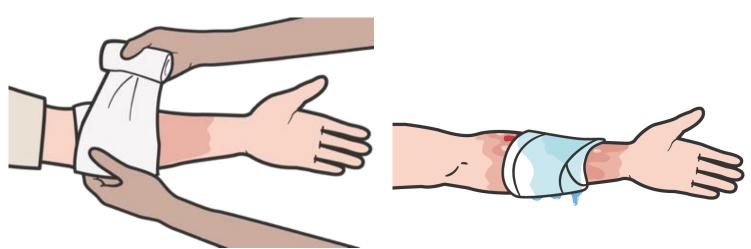

### **BURN CARE**

**COVER** 

burns

#### **EXTRACT**

Extract from burning vehicle, building, or area

#### **STOP THE BURNING PROCESS**

Be sure to assess MARCH before burn care

The burn area with dry,

sterile dressings for general

## WHITE PHOSPHORUS = WET DRESSING

Eliminate wound contact with oxygen

#### **ASSESS FOR A FRACTURE**

#### WARNING SIGNS OF A FRACTURE:

Significant pain and swelling

An audible or perceived "snap"

Different length or shape of limb

Loss of pulse or sensation in the injured arm or leg (check pulse before and after treatment)

Crepitus (hearing a crackling or popping sound under the skin)

**CLOSED** FRACTURE

#### **OPEN** FRACTURE

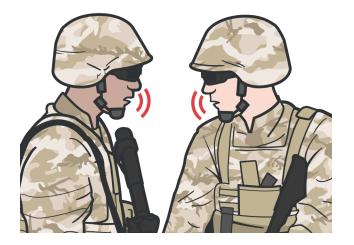

Communicate with the casualty if possible

Encourage.

Reassure.

Explain care each step of the way

Communicate with tactical leadership as soon as possible with status and evacuation requirements throughout casualty treatment as needed

#### COMMUNICATE WITH EVACUATION AND MEDICAL ASSETS

Communicate with the evacuation system to coordinate TACEVAC/MEDEVAC using the 9-Line MEDEVAC request

Keep the casualty's DD Form 1380 up to date

TACTICAL COMBAT CASUALTY CARE (TCCC) CARD	
BATTLE ROSTER #:	
EVAC: 🗌 Urgent 🔲 Priority 🗌 Routine

SERVICE: UNIT:	ALLERGIES:

**COMPLETE MIST** 

## **PHASE 3: TACTICAL EVACUATION CARE**

#### **CASUALTY MONITORING**

Continue to reassess and monitor casualty

#### **EVAC REQUEST** Use 9-Line format

#### **CASUALTY PREP**

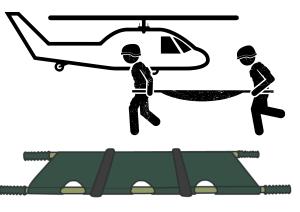

Secure items

Prep litter

Prep evac equipment

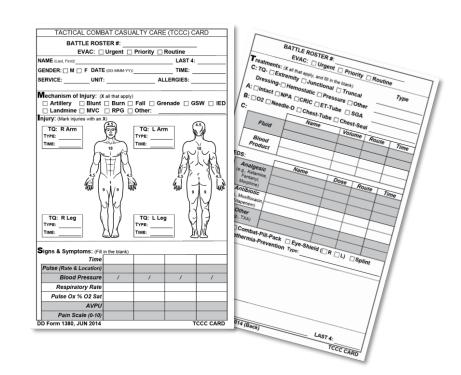

Pack casualty

(Litter Transport)

#### PRE-EVAC PROCEDURES Complete DD Form 1380

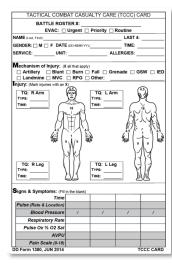

#### **TRAINER-LED DEMONSTRATION**

**Tactical Trauma Assessment** 

#### TACTICAL TRAUMA ASSESSMENT SUMMARY

We defined Tactical Trauma Assessment We discussed assessing the casualty using MARCH PAWS We discussed proper communication and documentation

DEFENSE HEALTH AGEN

### **CHECK ON LEARNING**

During which phase of care is the TTA performed?What pneumonic is used to prioritize care during the TTA?What is a blood sweep?

### **ANY QUESTIONS?**
